SUMMARY

Full Stack & DevOps engineer with 5 years of experience on AWS. Independently designed and took to production an enterprise LLM gateway of 16 microservices and its Terraform infrastructure across 3 environments, with cost control, multi-tenant security and tracing of every call. Specialised in serverless architectures, CI/CD (GitLab CI, Kubernetes) and generative AI in production with clear governance: cost caps, human validation and audit logging.

TECHNICAL SKILLS

Cloud & DevOps	AWS (Lambda, API Gateway, S3, SQS, Cognito, EventBridge, CloudFront, IAM, CloudWatch) · Terraform · Terragrunt · Docker · Kubernetes · ArgoCD · GitLab CI · HashiCorp Vault
Security	HashiCorp Vault · Multi-tenant isolation · SSRF protection · Audit logging · AWS IAM and Cognito
Generative AI	LLMs · LLMOps · AI governance (human validation, cost caps) · AI agents (LangGraph) · Model Context Protocol (MCP) · RAG and vector search · Langfuse · Apache Airflow
Languages & Frameworks	Python (FastAPI, Chalice) · TypeScript · JavaScript · Node.js (Express) · Angular · React / Next.js
Databases	MongoDB · MySQL · SQL / NoSQL
Testing & Quality	TDD · Automated unit and integration tests in CI/CD · Blocking coverage gates · pytest · Vitest · Playwright
Methods & Tools	Agile (Scrum) · Git · Microservices · Serverless and event-driven architectures

WORK EXPERIENCE

Full Stack & DevOps Engineer, Portago

12/2024 - Present | Paris

LLM Gateway - Enterprise AI gateway

Context: OpenAI-compatible API that routes every call from the company's products to LLM providers.
Team: 1 developer & DevOps, 1 Product Owner | **Methodology:** Agile / Scrum

- Independently designed and took to production an LLM gateway of 16 AWS Lambda microservices.
- Products integrate with no code changes thanks to OpenAI SDK compatibility.
- Service continuity: automatic LLM provider failover, retries on errors and SSE streaming.
- Capped AI spending for each product: budget reserved before every call and FinOps reporting.
- Security: provider keys in Vault, multi-tenant isolation, SSRF protection and an audit log.
- AI tool governance: MCP servers ranked by risk level and Langfuse tracing of every request.
- Terraform/Terragrunt infrastructure across 3 environments, deployed through GitLab CI pipelines.
- Python client library, contract tests and a 3-language Angular admin console.

Technologies: Python · Chalice · AWS Lambda · API Gateway · Cognito · Vault · Langfuse · MCP

Moveo - HR skills and internal mobility platform

Context: One application for skills, training, internal mobility and recruitment, with AI supporting employees and HR.
Team: 2 developers, 1 DevOps, 1 Product Owner | **Methodology:** Agile / Scrum

- Designed multi-company serverless microservices: skills, positions, quizzes and training.
- Built asynchronous AI generation via SQS of learning paths, quizzes, CV analyses and career advice.
- Developed 2 AI assistants, for employees and HR: a LangGraph agent and a 132-tool MCP server.
- Made AI actions safe: two-step confirmation before any data change.
- Human-in-the-loop: HR validates expert skill levels and completed learning paths.
- Developed the 3 Angular areas, employee, HR and admin, each limited to its role's permissions.
- Containerised the agent services on Kubernetes, with state control and sync by ArgoCD.

Technologies: Python · FastAPI · Generative AI · LangGraph · MCP · Kubernetes · ArgoCD · SQS · EventBridge

Full Stack & DevOps Developer, Allence Cloud

11/2021 - 11/2024 | Tunisia

Career - AI-assisted recruitment platform

Context: Automated candidate pre-screening: CV analysis, scoring and AI-led interviews.
Team: 2 developers, 1 DevOps, 1 Product Owner | **Methodology:** Agile / Scrum

- Automated pre-screening: offers in 4 formats, LLM-based CV analysis and a score out of 100.
- Delivered AI interviews in 3 formats: written, voice and phone with Twilio.
- Reliable releases: test-driven development and a blocking coverage gate in CI.
- Built candidate-to-offer matching with MongoDB vector search over a 530-skill catalogue.
- Event-driven architecture with SQS and Lambda workers to absorb long-running AI jobs.
- LangGraph conversational agent and a 60-tool MCP server for recruiters.
- Decision support for recruiters: side-by-side candidate comparison and detailed evaluation reports.
- Containerised the FastAPI microservices on Kubernetes, with state control and sync by ArgoCD.

Technologies: Python · FastAPI · Generative AI · LangGraph · MCP · MongoDB · Twilio · OpenAI Realtime · CloudFront

PhotoEvent - Event photography marketplace

Context: Event photo sales, with photo search by face recognition.
Team: 2 developers, 1 DevOps, 1 Product Owner | **Methodology:** Agile / Scrum

- Independent releases per domain: one repository and one pipeline per service, 80 % minimum coverage.
- Designed a serverless backend of 17 Lambda functions and 104 API routes, with an Angular front end.
- Photo search by face recognition with Amazon Rekognition, one collection per event.
- Automated gallery import with an Apache Airflow DAG on Kubernetes.
- Reliable photographer finances: orders, commissions and payouts in MongoDB transactions.
- Image protection with watermarks and signed download links valid for 120 seconds.
- Automatic moderation of customer reviews with generative AI via SQS.

Technologies: Python · Chalice · Generative AI · Rekognition · Airflow · S3 · SQS · Terraform · Playwright

Full Stack Developer, Dida Mind

02/2021 - 07/2021 | Tunisia

ProHunting - Hunting tourism platform

Context: Booking and management of hunting stays in Tunisia for European clients.
Team: 1 developer, 1 Tech Lead, 1 Product Owner | **Methodology:** Agile / Scrum

- Designed and built the complete application: Node.js/Express API and Next.js front end.
- Launched the public website in French, English and German, with a client area and private forum.
- Built the back office that runs the full stay lifecycle, from request to closing.
- Real-time alerts to the team for every new stay request with Socket.IO.
- Integrated a partner hotel-booking API and automated generation of stay documents in PDF.
- Secured the back office: role- and user-level permissions, account deletion restricted to super-admins.

Technologies: Node.js · Express · Next.js · TypeScript · MySQL · Socket.IO · Puppeteer · Playwright

EDUCATION

- Engineering Degree in Software Engineering - ESPRIT, Tunisia, 2024
- Bachelor's Degree in Computer Science - ISTIC Borj Cedria, Tunisia, 2021
- Continuing education: Model Context Protocol, introduction and advanced - Anthropic, 2026

CERTIFICATIONS AND LANGUAGES

- AWS Certified Developer – Associate - AWS, 2026
- Docker Certified Associate (DCA) - Docker, 2026
- Astronomer Certified for AI Orchestration Fundamentals - Astronomer, 2026
- Multicloud Network Associate - Aviatrix, 2025

Languages: Arabic (native) | French (fluent) | English (fluent)
